

Annual Usage Report for Automated License Plate Readers

City of San José

Reporting Year: January - December 2025

Owning department(s): San José Police Department

Department owner: Deputy Chief, Executive Officer

Context for Annual Usage Reports

The City annually reports on the usage and accuracy of its priority technologies that collect personal information. This document is prepared in coordination with the owning department and the City Privacy and AI Office, and satisfies the required reporting detailed in the relevant Data Usage Protocol.¹

1) Program Summary

Automated License Plate Readers (ALPRs) use high speed cameras to photograph vehicle license plates, which are used to identify if the vehicle is stolen or part of an ongoing investigation. The purpose of ALPR cameras is to improve criminal investigations and deter crime in the surrounding area.

2) Updates to Data Usage Protocol and Plans for Future Years

The Data Usage Protocol (DUP) was updated during the reporting period. The DUP update, approved by City Council on March 10 2026,² included prohibiting ALPR integration with facial recognition and biometric analysis software, and prohibiting the placement of ALPR cameras in positions that capture data from vehicles entering or exiting any reproductive health care services facility primarily providing abortion services or any location primarily used for religious observance, or premises of Consulate General offices or embassies, or health care facilities that primarily offer gender-affirming care. The City was not engaging in any of these now-prohibited activities before the update.

The Operational Procedures were updated with the provision that multi-factor authorization is required for access into the ALPR system.

The Sharing section was updated to clarify that SJPD only shares data with California law enforcement agencies subject to the California Values Act (Senate Bill 54, 2017) and Automated License Plate Recognition Systems: Use of Data (Senate Bill 34, 2015). These laws prohibit information sharing with federal immigration enforcement. Transmittal of Police Department Automated License Plate Reader data to federal agencies for immigration enforcement is illegal. The City was not sharing any information to federal agencies for immigration enforcement before the update. Additionally, a new clause was added which requires command staff approval prior to assisting agencies without existing access.

Finally, the data retention period was reduced from one year to 30 days.

3) Reporting Metrics on Usage and Accuracy

¹ See all published Data Usage Protocols at: <https://www.sanjoseca.gov/digitalprivacy>

² See Council item 4.1 from March 10, 2026:
<https://sanjose.legistar.com/LegislationDetail.aspx?ID=7928731&GUID=678921B3-AF04-4C16-B5B2-4604947972B3>

a. Reads by location

This metric shows the number of plates read (i.e., number of photographs taken) by location by the ALPR system. Overall, 306,896,003 total reads occurred during 2025. A full table of reads and hits by street location is available in Appendix 1.

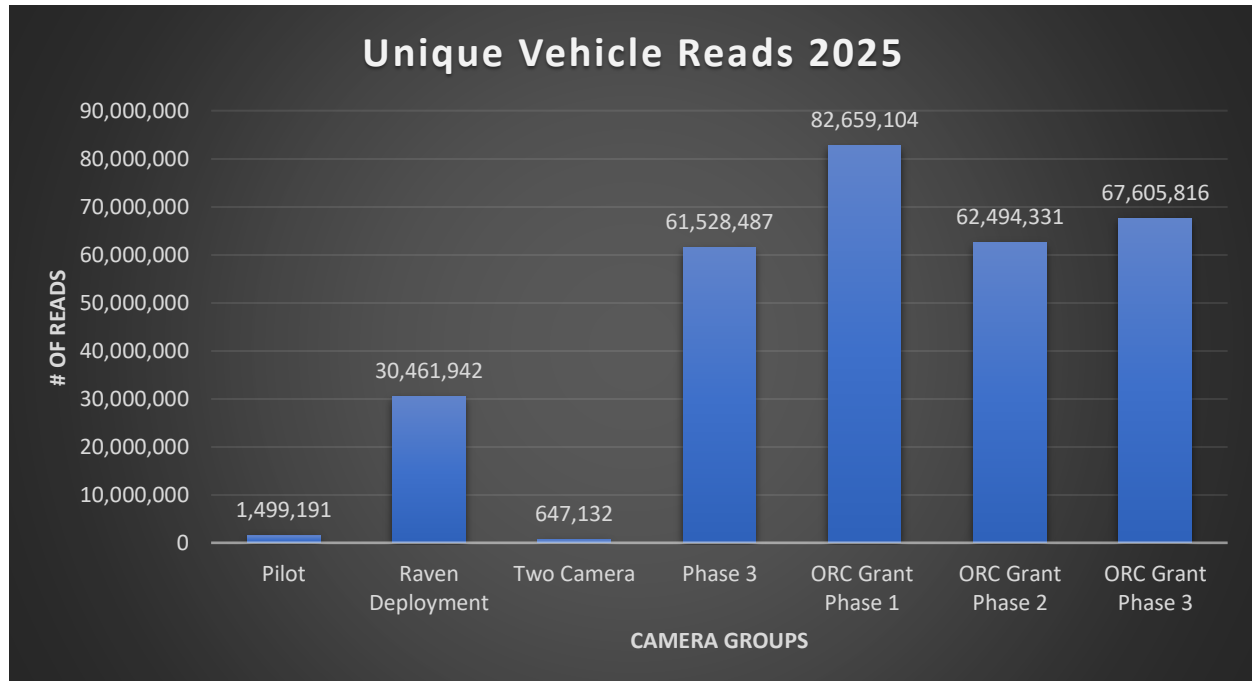

Figure 1: Number of unique vehicle license plate reads by camera group.

b. Hits by location

This metric shows the number of “hits” by location. A “hit” is when the San José Police Department (SJPd) is alerted that a vehicle involved in an active investigation (i.e., on a “hotlist”) has been identified by an ALPR camera. Overall, 1,703,038 total hits occurred during 2025. A full table of reads and hits by street location is available in Appendix 1.

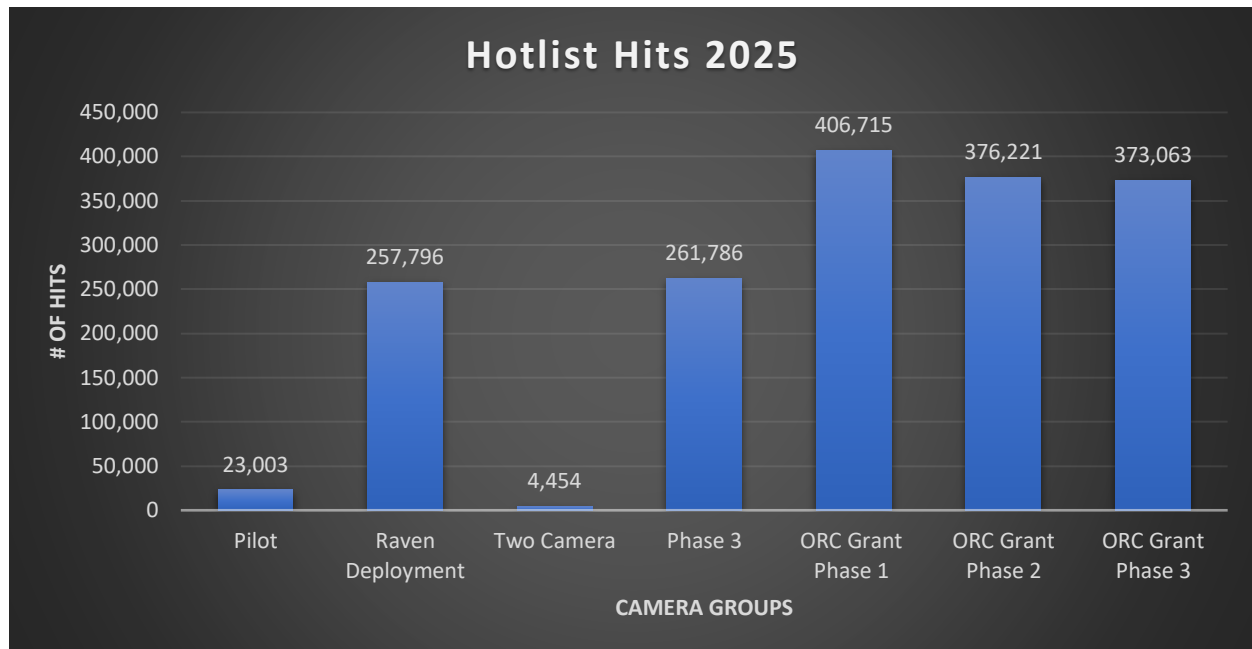

Figure 2: Number of “hits” by camera group.

c. Records accessed by SJPD

SJPD conducted 308,700 ALPR system queries during 2025. This includes records from partner agencies, which are other law enforcement agencies in California.³

d. Accuracy of system

In 2024, the City Privacy and AI Office conducted a study on the ALPR system and identified an accuracy rate of at least 80% under any weather conditions. The cameras and ALPR system have not changed since the study was conducted, so a new accuracy study was not required.

Table 1 details accuracy of the system as of the study date on March 1, 2024. These accuracy levels are comparable to other research.⁴ An 80-90% accuracy rate is a reasonable level when combined with human verification, which is required for ALPR usage. The accuracy rate was lower at night and in unclear conditions (rainy or cloudy) when compared to the accuracy during the day in clear conditions.

Table 1: Accuracy of ALPR reads in the field, measured on March 1, 2024.

Circumstances	# of Reads	# Correctly Read
At night when it is cloudy and/or raining	26	21 (81%)
At night with clear skies	177	154 (87%)
During the day when it is cloudy and/or raining	52	48 (92%)

³ A full list of partner agencies can be found on San José Police Department’s ALPR portal: <https://transparency.flocksafety.com/san-jose-ca-pd>

⁴ While the space is limited in research, European agencies and companies have conducted some ALPR accuracy tests: <https://sensorable.io/articles/anpr-accuracy-test/index.html>, <https://www.nedapidentification.com/insights/the-wide-range-of-anpr-solutions-calls-for-guidance-in-making-the-right-choice/>, and https://www.researchgate.net/publication/261503938_Accuracy_of_automatic_number_plate_recognition_ANPR_and_real_world_UK_number_plate_problems

During the day with clear skies	103	94 (91%)
---------------------------------	-----	----------

4) Compliance reporting

After reviewing all access logs, system accuracy, and summary of the program, the City Privacy and AI Office finds SJPd in compliance with its Data Usage Protocol. In reviewing the network audit logs of SJPd, the City Privacy and AI Office confirmed that all active users with access to SJPd ALPR data are authorized California agencies.

Organization access logs also include a justification for each access. While most access logs included a case number, some instead provided a descriptive justification for access, such as “Stolen Vehicle”.

5) Conclusion

The ALPR system has been used in compliance with the Data Usage Protocol. The access controls and audit logs provide the City with comprehensive controls over who, how, and when people can access the data.

6) Recommendations

SJPd should continue training officers on accurate data reporting when accessing the ALPR system, especially given the recent updates made to the Data Usage Protocol for ALPR. The City Privacy and AI Office recommends that SJPd work with the vendor to include the zip code of the ALPR device in the data collected for plate reads and hotlist hits. This will allow for more efficient reporting by location and equity analysis in future Annual Usage Reports.

Additionally, the City Privacy and AI Office recommends future research into the potential preventative effects of the ALPR system. In other words, study if areas with ALPR systems show a decrease in reported incidents relative to similar areas with no ALPR system.
