design of energy saving measures, Communication design (marketing a PR)

Client Centered Consultancy and Psychotherapy – PCA (2003 – 2008)

Psychoconsulta.sk

Last 25 years I am deeply interested in:

Philosophy of consciousnesses, spirituality, mindfulness, meditation, psychology of unconscious, creative problem solving, paradigm shifting experiences, active working with body pain and pain as such, hardening, body weight exercising, weightlifting, breathing exercises. Music and nature of beauty.

Counseling and coaching.

Spending time in wild nature. Bush crafting. My dream is to drive a motorhome and meet with real people in Norway.

I am actually working on those problems or thots experiments:

What happened with consciousness or self when it theoretically passes speed of light?

How will this person experience it theoretically? What will happened with his self?

How is mind creating the world? Can the mind be wrong or mistaken by doing that?

What is the difference how Albert Einstein understand time and how Henri Berkson understand Time? Why they were not able to understand each other?

What is the relationship between sound and Time?

What does it mean that all universe is within us, or God is within us? Is there any difference?

Why it is difficult to communicate it? What is the barrier?

Does God want to be known?

What does it mean that something is alive or vibrant? Is it somehow connected with conservation of energy?

Where is Time? Does It have any shape?

What are the limits of logical positivism? What is the role and place of intellect?

What does it mean omnipotence? Everything is here in its potentiality just NOOOW?

Why is deep silence so fascinating in music?

What is the nature of meaningful coincidence or synchronicity?

What is the mechanism, how energy is saved within the particles?

What would the situation look like from the point of view of consciousness just before the big bang?

I need help with:

Writhing and conceptualization my thinking about topics connected with Time. Creating and publishing articles. I need to know how hypothesis are in congruence with current science. What level of novelty is there? I need to cooperate with somebody more intelligent than me to help me formulate my thesis which I understand inwardly at this stage. I need to be given difficult questions about nature of Time and stimulate my thinking in constructive discussion where mutual understanding is possible.
