# Toward an entanglement of human and more-than-human

- The more-than-human concept enlarges the boundary of the humanity by entangling humans with the entirety of non-human living beings
  - humans are already 'augmented' by the more-than-human worlds
- Human Centred Design needs to be updated to a More-than-human Centred Design
  - to nurture sustainable human/multi-species natureculture onto our damaged environment based on the idea of mutual care
- How does this thinking affects our design of technologies?

## Rethinking Design through the Fermenting perspective

- Thinking about the design of things from fermentation
  - From “making” to “nurturing” a design
- Design things that “ferment”
  - Things that entangle with the more-than-human worlds, by embodying the non-human living beings and grounding in the human processes
- Design dimensions for realising mutual care of humans and more-than-humans
  - “Fluctuating continuously,” “Noticing the process,” “ Entrusting others.”

Exploring alternative Design Perspectives

	<b>Control</b>	<b>Ferment</b>
<b>Relations</b>	Manipulate the object from the outside	Relating and entrusting to others
<b>Method</b>	Optimization towards a predetermined correct answer	Noticing the value of experience itself
<b>World view</b>	A world defined by instructions	A world where meaning and value emerge and change
