Installation

Placement: Soil Pro+

Attach the tripod/holder to the Air+ unit

Air+

Tripod/Holder

Screw the tripod in the hole on the bottom of the sensor

Bottom of the sensor

Installation

Placement: Soil Pro+

We recommend placing the sensor 20cm above the crop and not shaded by the leaves

You can also choose to place it higher up in the greenhouse.

2

alternative

Row between plants

3

We recommend placing the sensor as level/straight as possible.

The level part has to be the top of the sensors.

Parallel to the ground

Installation

Placement: Pots/Blocks

For potted plants, you can place the probe either vertically / horizontally.

1

Leave at least 10 cm between the sensors.

2

Place the pins all the way in the substrate.

3

Place the pins perpendicular to the substrate.

4

When choosing to place them horizontally, we recommend inserting the substrate sensor in the **bottom one third part** of the pot.

Installation

Placement: Slabs

For potted plants, you can place the probe either vertically / horizontally.

1

Leave at least 10 cm between the sensors

2

Place the pins all the way in the substrate

3

Place the pins perpendicular to the substrate

4

For slabs, we recommend inserting the substrate sensor in the bottom part of the slab.

And above the drain hole.

Installation

Placement: Slabs

For potted plants, you can place the probe either vertically / horizontally.

Installation

Placement: Soil

1

Leave at least 10 cm between the sensors.

2

Place the pins all the way in the substrate.

3

Place the pins perpendicular to the substrate.

4

For soil, we recommend inserting the substrate sensor around 5cm away from the dripper.
