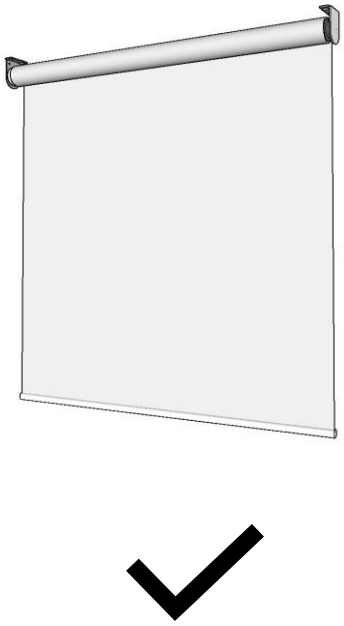
Before You Start – Important Information

- Only the blind you want program can be ‘awake’, all other blinds must be deactivated whilst programming.

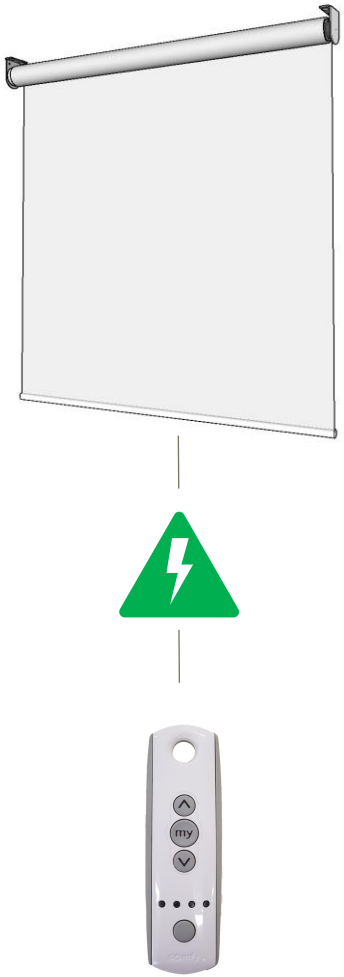
- The Somfy Sonesse 30 WF RTS motor uses an internal Li-ion battery and must be charged via the charging port on the head of the motor
- If your shading product is in a headbox there maybe a short cable already plugged into the head of the motor. This should be made accessible through a cable exit in the headbox to allow easy charging of the battery

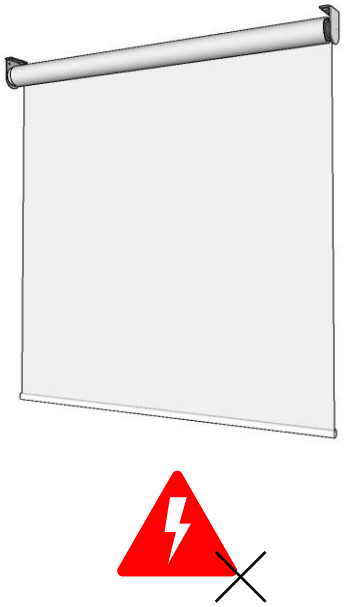
Before You Start

Only one motor should be activated at a time when programming – once a motor has been fully programmed there is no need to deactivate it before programming the next motor.

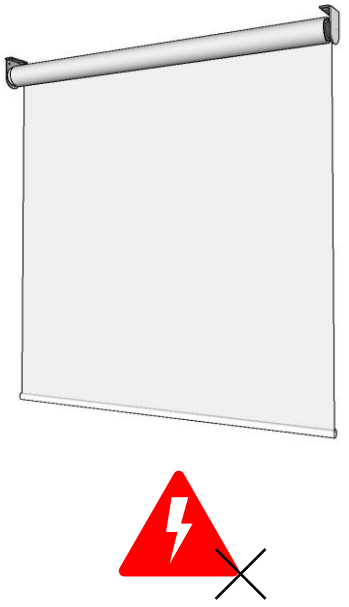


Programmed:
Awake





Not Programmed:
Asleep



Not Programmed:
Asleep

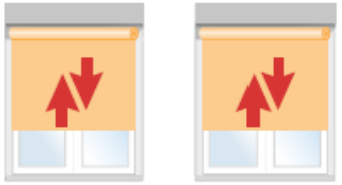
Before You Start

For a motor that is in sleep mode, or with RTS Deactivated

When connected to charger, or when the programming button on the head is pressed briefly, the motor reacts with several up/down movements. The number tells the motors programmed status

If the motor moves up/down...

3 times =
the motor is not programmed

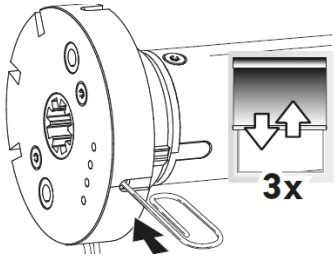


2 times =
the motors is programmed, but
no control point is assigned

1 times =
the motor is programmed and
assigned to a remote control.

Pairing The Remote

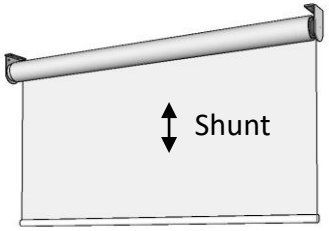
Pairing the remote and setting turning direction



Wake the blind up by briefly pressing the programming button on the head of the motor. The blind will shunt 3 times

You now have 60 seconds to complete the steps on this page and pair the remote control

If you have a multi channel remote, select the channel you wish to pair the blind to



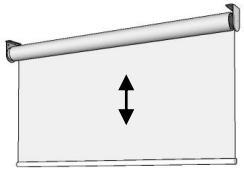
Press and hold the buttons together on the remote control until the blind shunts

Pairing complete

The motor can also be woken up by connecting the charger

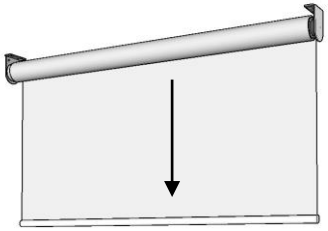
Changing Turning Direction

Check and change the turning direction of the motor

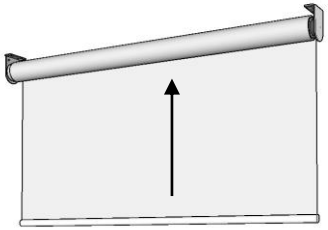


Press and hold the ▼ button and observe the direction the blind travels.

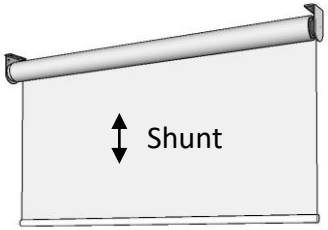
It could travel in either direction depending on which side the motor is on



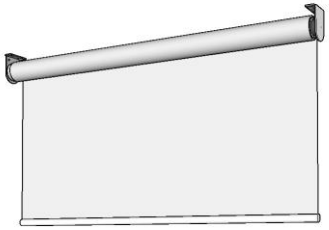
If the blind travels DOWN when you press the ▼ button you can skip the rest of this page and move straight on to setting the limits



If the blind travels UP when you press the ▼ button you need to change the turning direction



Press and hold the MY button until the blind does a shunt



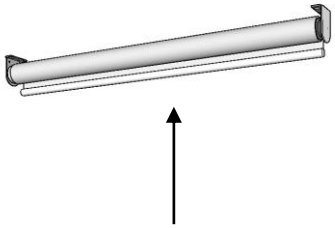
Turning direction changed

You can now check the turning direction is correct by pressing and holding EITHER the ▲ or button ▼

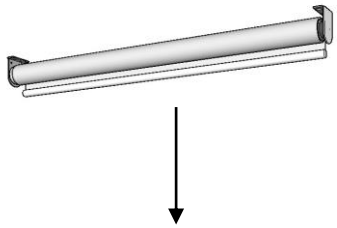
The motor is still in programming mode so you have to press and hold to drive the blind

Setting Limits

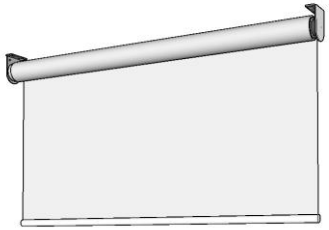
Set a top and bottom limit position



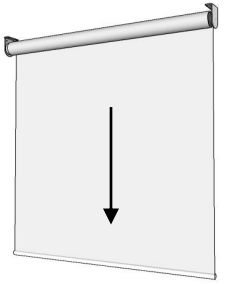
Use the ▲ ▼ buttons to move the blind to the position required for a top limit



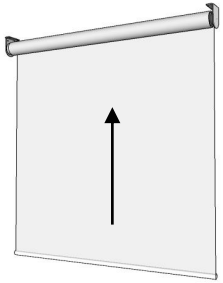
Press and hold the ▼ MY buttons together until the blind starts to open



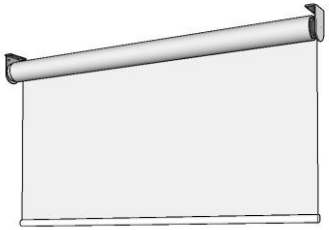
Press the MY button once to stop the blind moving



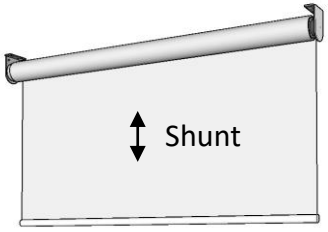
Use the ▲ ▼ buttons to move the blind to the position required for a bottom limit



Press and hold the ▲ MY buttons together until the blind starts to open



Press the MY button once to stop the blind moving



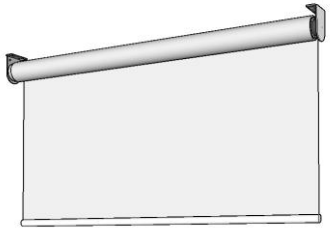
Press and hold the MY button until the blind shunts

Briefly press the red button on the back of the remote and the blind will shunt

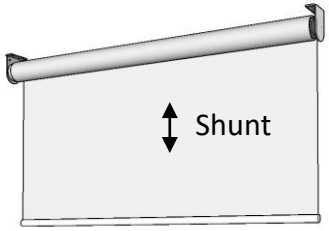
Limits Set

Intermediate Stop Position

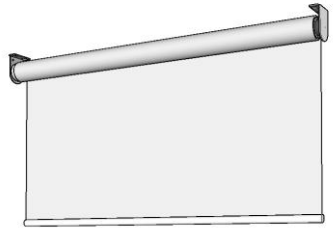
It is optional to set an intermediate stop position



Drive the blind to a middle position where you require an intermediate stop



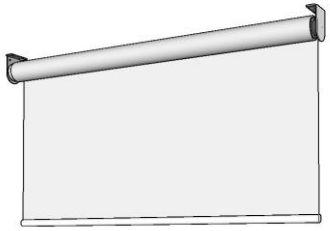
Press and hold the MY button until the blind shunts



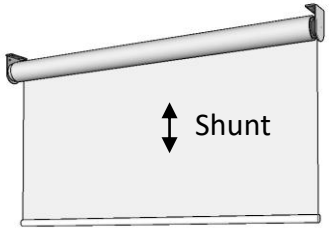
Intermediate stop set

The intermediate stop position (or MY position) can not be in the same place as the top or bottom limit position

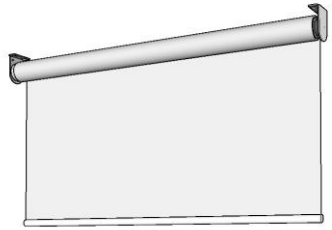
Deleting the intermediate stop position



Press the MY button to drive the blind to the intermediate stop position



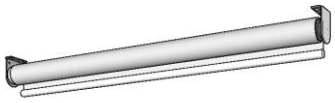
Press and hold the MY button until the blind shunts



Intermediate stop removed

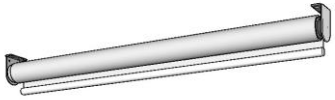
Adjusting Limits

How to adjust any limit



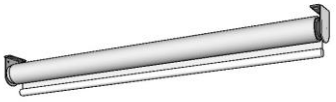
Either top or bottom limit

Move the blind to the limit you wish to adjust

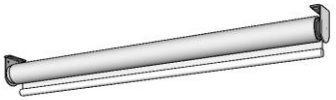


Shunt

Press and hold the ▼ ▲ buttons together until the blind shunts

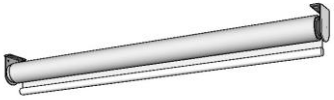


Use the ▲ ▼ buttons to move the blind to the new stop position you wish to set



Shunt

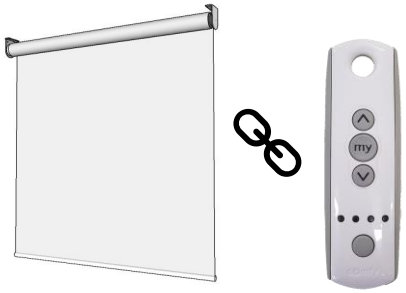
Press and hold the MY button until the blind shunts



Limit Adjusted

Adding Remotes

Copying a channel on one remote to a new remote



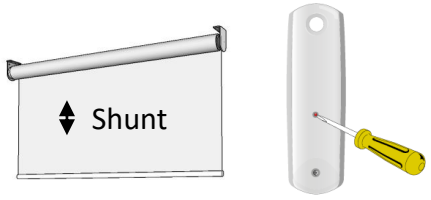
Start with a remote control that is already paired to the motor

If you have a multi channel remote, select the channel you wish to pair the blind to

Press and hold the red button on the back of the remote until the motor shunts

Within 60 seconds, take the new remote control…

If it is a multi channel remote, select the channel you wish to pair the blind to



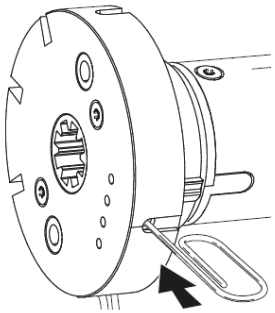
Press and hold the red button on the back of the remote until the motor shunts

New remote paired

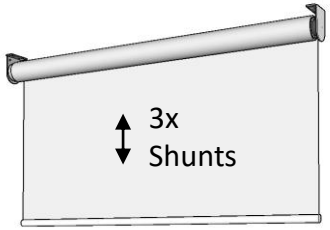
Repeat this procedure for each channel you want to copy to the new remote control

Motor Reset

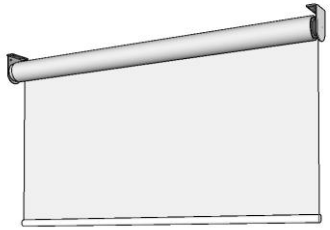
Reset motor back to factory settings



Locate the programming button on the head of the motor – small hole



Press and hold this button until the blind has shunted up/down 3 times



Factory reset complete
