Before You Start – Important Information

Only the blind you want program can be connected to the power whilst programming. Disconnect all other blinds from the power to avoid interference.

Do not reduce the motor cable to less than 30cm as this may cause communication problems between the remote control and the motor as the motor uses the copper core of the cable as a radio antenna.

Before You Start

Only one motor should be powered on at a time when setting limits or making any programming changes

Pairing The Remote

Pairing the remote and setting turning direction

Apply continuous power to the blind you want to program.

You now have 60 seconds to complete the steps on this page and pair the remote control

If you have a multi channel remote, select the channel you wish to pair the blind to

Press and hold the   buttons together on the remote control until the blind shunts

Pairing complete

Changing Turning Direction

Check and change the turning direction of the motor

Press and hold the  button and observe the direction the blind travels.

It could travel in either direction depending on which side the motor is on

If the blind travels DOWN when you press the  button you can skip the rest of this page and move straight on to setting the limits

If the blind travels UP when you press the  button you need to change the turning direction

Press and hold the  button until the blind does a shunt

Turning direction changed

You can now check the turning direction is correct by pressing and holding EITHER the  or  button

The motor is still in programming mode so you have to press and hold to drive the blind

Setting Limits

UMBRA®

Set a top and bottom limit position

Use the ▲ ▼ buttons to move the blind to the position required for a top limit

Press and hold the ▼ MY buttons together until the blind starts to open

Press the MY button once to stop the blind moving

Use the ▲ ▼ buttons to move the blind to the position required for a bottom limit

Press and hold the ▲ MY buttons together until the blind starts to open

Press the MY button once to stop the blind moving

Press and hold the MY button until the blind shunts

Press and hold the red button on the back of the remote until the motor shunts

Limits Set

Intermediate Stop Position

It is optional to set an intermediate stop position

Drive the blind to a middle position where you require an intermediate stop

Press and hold the **MY** button until the blind shunts

Intermediate stop set

The intermediate stop position (or MY position) can not be in the same place as the top or bottom limit position

Deleting the intermediate stop position

Press the **MY** button to drive the blind to the intermediate stop position

Press and hold the **MY** button until the blind shunts

Intermediate stop removed

Adjusting Limits

How to adjust any limit

Either top or
bottom limit

Move the blind to the limit you
wish to adjust

Shunt

Press and hold the   buttons together until the blind
shunts

Shunt

Use the   buttons to move
the blind to the new stop
position you wish to set

Shunt

Press and hold the  button
until the blind shunts

Limit Adjusted

Adding Remotes

UMBRA®

Copying a channel on one remote to a new remote

Start with a remote control that is already paired to the motor

If you have a multi channel remote, select the channel you wish to pair the blind to

Press and hold the red button on the back of the remote until the motor shunts

Within 60 seconds, take the new remote control...

If it is a multi channel remote, select the channel you wish to pair the blind to

Press and hold the red button on the back of the remote until the motor shunts

New remote paired

Repeat this procedure for each channel you want to copy to the new remote control

Motor Reset

Reset motor back to factory settings

Begin with the power applied to the blind for at least 60 seconds

Turn off the power for 4 seconds

Turn on the power for 8 seconds

Turn off the power for 4 seconds

Turn on the power

The blind will now travel for 5 seconds in one direction

Press and **hold** the button on the back of the handset until the blind shunts **2 times** with a **pause** between the shunts

Factory reset complete
